Mr. Mumpower:

Since access control / management reduces the number and complexity as well as increases the spacing of events to which the driver must respond, this will result in improved traffic operations and reduced accident experience. The shared parking and alleys has always been the goal of SHA in access management and consolidation amongst property owners. This will help in improved traffic flow, fewer accidents, reduce delay, increased capacity, improve fuel economy and reduced vehicle emissions. If this is implemented as part of the City of Gaithersburg Master plan, it will reduce the traffic impact of new and old development on our roadways.

Thank you for sending this for our review.

Ollie,

Could you please forward the attached appendix to your contacts at District 3 SHA to make sure they are comfortable with the narrative text as it relates to the hypothetical diagrams. We just want to make sure that what we are advocating does not conflict with SHA ideas about MD 355. The record is open until 5pm August 13, should SHA wish to comment. Thanks,

Rob
